PROJECT REPORT OF DIGITAL LITERACY

Submitted By: **Chandresh Kuntal**

Reg.No: **25BAI10955**

Programme: **B-TECH**

Branch: CSE(AI&ML)

Introduction

As the newly appointed Student Digital Ambassador I will help my fellow students learn how to use digital technologies in their current career paths. Digital literacy today requires students to handle technological tools which extend beyond basic technology operation because users must maintain professional standards while using these tools. My first assignment requires me to create a complete Digital Literacy Portfolio. The framework will enable users to develop essential skills which include building strong online professional identities and controlling their digital footprints and understanding proper digital communication practices. The portfolio will function as a practical resource which combines best practices with actual case studies and selected digital tools which students can use for their academic and professional growth. The program will develop a campuswide digital citizenship culture through its focus on proactive cybersecurity measures and data privacy and responsible social media use. The faculty The committee will receive the portfolio for review and it will be shared with students to provide them with the tools they need to engage with digital content in a safe and professional manner.

Task - 1 Create a Digital Literacy Awareness Infographic

I used Canva to create a one-page Digital Literacy infographic which meets the requirements of this project. I chose this platform because it provides powerful design tools together with an interface that designers of all skill levels can use to create high-quality final work. The visual narrative is divided into three main components which serve as its central elements.

The first section defines digital literacy as the ability to use current technological tools in a responsible and effective manner. The second section presents students with a productivity framework which includes essential academic tools such as cloud computing systems and teamwork software to improve their educational outcome mes. The system establishes digital security measures which include mandatory internet security protocols that combine multi-factor authentication with personal data protection methods.

I developed my design approach to make information easy to scan. The use of basic text together with chosen icons and a testing color system helped me create an experience which would maintain student focus. The main challenge which brought me the greatest fulfillment required me to organize multiple details into one display which included all essential elements while keeping an attractive visual structure.

Task - 2 Build Your Student Digital Porolio

I have created professional profiles on LinkedIn GitHub and ResearchGate to fulfill my goal of establishing a complete digital identity. I started my LinkedIn profile by providing official documentation of my B.Tech degree in Computer Science and Engineering which helped me build a professional network. I will use this platform as my ongoing portfolio to display my technical certifications and project achievements and internship work to professionals in the industry.

I selected GitHub as my main platform for technical work because it helps me build professional relationships. I will use its version control features to manage my software projects and participate in open-source projects while I work to improve my programming abilities. I added ResearchGate to my online presence because I wanted to connect practical work with scientific research. The global research network enables me to learn advanced research methods while I gain knowledge about developing technologies during the upcoming four years.

Task - 3 Explore Coding & Collaboration Platforms

I utilized HackerRank to develop my technical skills and Google Workspace to create assessment tools for my work on this project. I completed the basic "Solve Me First" challenge on HackerRank platform. The exercise helped me develop essential problem-solving skills together with skills in constructing syntactical elements and in making logical deductions which established a foundation for my programming abilities.

At the same time, I built a specialized Digital Literacy Awareness Quiz using Google Forms as my framework. The test contained exactly five questions which used both multiple-choice and short-answer response methods. I created an automatic system for data gathering and statistical evaluation when I connected the form to Google Sheets. The system

allows users to review their responses and find out which knowledge areas they need to work on most urgently.

I will use these platforms throughout my entire academic career. My continuous practice on HackerRank will help me develop my algorithm skills which are essential for my upcoming projects and school tests and job interviews. The Google Workspace environment will help our team work together better while providing tools to manage our surveys and handle our data efficiently. The combination of these technical tools together with collaborative tools will help me maintain academic success while preparing for my future career development.

Task - 4 Draw Professional Email & Request Guide

The higher education sector experiences frequent conflicts because people fail to communicate properly through email. The general public considers transmitting a message to a faculty member without using a subject line and proper greeting and context information which includes the urgent request "Send marks fast" to be extremely unprofessional. Because students lack digital etiquette skills their communication attempts fail which leads to extended waiting periods and damage to their personal reputation.

Students need to follow professional email standards which they must learn through strict practice. The process requires him to write a subject line which describes the topic of his message while he needs to begin his message with a polite greeting and write his question with clear and polite language. A standard professional closing needs to be included at this point. The students who implement digital etiquette standards will reduce operational issues while building their professional reputation which results in their messages being treated with esteem by others.

Task - 5 Cybercrime Awareness Case Study & Prevention Guide

My cybersecurity research revealed that modern phishing campaigns demonstrate dangerous development. Cybercriminals use authentic-looking logos and spoofed domains and high-pressure language to create trust which they use to exploit their victims. The situation showed that people can suffer complete destruction from their first contact with a hacked link which leads to identity theft and major financial damage.

The findings of this study led me to completely change how I conduct online activities. My new operating procedures require me to carefully check all sender information and website links before I proceed with any tasks. I protect myself from threats by disabling fake urgent messages that attackers create and I check all sources of incoming communications. My increased understanding now enables me to guide my fellow students into developing safe digital navigation practices.

.

Conclusion

The Digital Literacy Portfolio functions as an assessment tool which evaluates all essential skills required by students to succeed in their academic studies and continue their professional growth in modern society. I learned practical digital ecosystem skills by completing designated projects which required me to establish professional networking profiles and practice coding skills and develop visual data representations through infographics and study official digital communication techniques. The project proved that people need to practice responsible digital citizenship which requires them to know social media etiquette and use safe communication approaches and study cyber threat materials particularly phishing attacks.

I enhanced my technical abilities and strategic communication skills through my daily use of LinkedIn and HackerRank and Google Workspace which function as standard collaboration tools used in various industries. My research on cybersecurity defense techniques and incident response systems has established my need for constant online monitoring to protect my digital activities.

The process of developing my portfolio has enhanced my digital strategy skills while I received training to perform my responsibilities as a Student Digital Ambassador. I now possess the ability to teach my peers about building effective online identities which enable them to write professionally while securing their digital activities.
